Practical Task 1:

Embarking on the Skills Bootcamp in Data Science (Fundamentals) has been a strategic move towards my entrepreneurial aspirations. My primary objective is to master Python for data visualization and analysis, as well as building machine learning models. This skill set will empower me to establish myself as a self-employed consultant specializing in crafting analytics dashboards and predictive models. The target market comprises small to medium-sized companies lacking in-house expertise for effective data visualization and analysis.

The motivation behind this venture stems from recognizing the transformative impact of data-driven decision-making. According to a survey by PwC, companies embracing data-driven strategies are three times more likely to witness improvements in strategic decisions. I aim to fill the gap for businesses that may not have the resources or skills to leverage their data effectively.

Choosing a Python-oriented bootcamp was a deliberate decision. Python's versatility, robust libraries, and its prominence in the data science ecosystem make it an ideal choice. The decision to specialize in data science within the bootcamp aligns with my broader vision. I envision using data visualization methods not only as a tool for business insights but also as an educational resource for visual learners. This dual-purpose approach not only serves my entrepreneurial goals but also contributes to fostering a culture of data literacy.

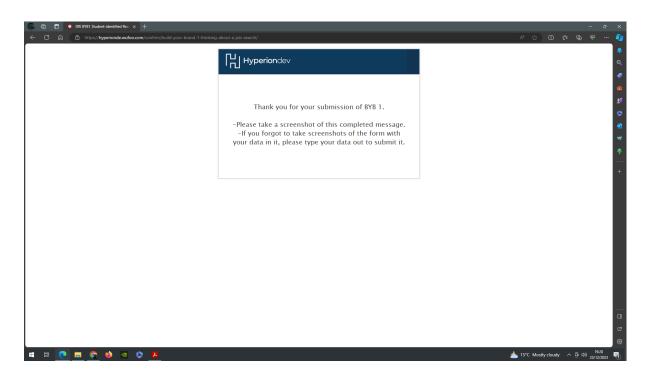

In support of this vision, I have shared articles linking data visualization to enhanced learning outcomes

(https://typeset.io/papers/robust-data-mining-visualization-for-learning-outcomes-1rq2jzs2 and

https://typeset.io/papers/robust-data-mining-visualization-for-learning-outcomes-1rq2jzs2).

In conclusion, my self-employment venture aims to bridge the gap for businesses seeking data-driven insights. Armed with Python proficiency and data science expertise, I envision not only aiding companies in strategic decision-making but also fostering a broader understanding of data through innovative educational tools. This entrepreneurial journey is not just about meeting market demands but also about contributing to a data-savvy future.

Practical Task 2:

Build Your Brand 1: Thinking about a job search

Please note that if the instructions here ever differ from the PDF Task it follow these (form) instructions as they will be the most up-to-date.

If you're self-employed:
Input the contact details of companies and the business contacts of places you would pitch your services or products to. Also, please fill in the section right at the end of the form.

If you are ready to apply for jobs:
You won't actually be applying in this task, but we would like you to think about the sort of roles
you might like to apply for and the sort of companies you might want to work for. Find 2 junior
tech roles currently being advertised, ensuring you consider large and small companies as well as
tech startups. For each of these, identify the recruiting [hiring managers (possibly the Tallent or
HR people at each company). Capture the details of each of the 2 roles and contacts in this form.
If any of your INLS are greater than 255 characters, shorten them by using bitly.com and paste
the shortened version into the form.

If you're not ready to apply for jobs yet or may even be currently employed and not looking for a new role right now but are hoping to achieve a promotion or new role working for your current employer: We still require you to identify relevant contacts and get into practice should you eventually look
